RE: DynaMed Plus – Coming April 2

Knowledge Management is pleased to bring you the updated point-of-care (POC) resource DynaMed Plus, effective April 2.

DynaMed Plus is the upgraded version of DynaMed which has been available enterprise-wide since 2015 via the Knowledge Resource Service (KRS) website.

With increased content, ease-of-use and potential for further integration with Connect Care, DynaMed Plus makes finding the right evidence easier than ever before.

This improved version maintains core features while providing:

- Clear, concise presentation of content with direct access to primary data
- Improved search functionality
- Expanded in-depth specialty content
- More than 4,400 medical graphics & images, including 1,000+ images from American College of Physicians
- New mobile app platform

Clinicians will appreciate the updated content and look, in a resource they already recognize as a trusted source of evidence to guide their practice and patient care decisions.

What do I need to do right now?

Continue to use DynaMed as always; on April 2 the new version will be automatically available for your use. An updated mobile app will also be available for download.

Visit the KRS website for upcoming training opportunities to support your transition to DynaMed Plus. In the meantime this FAQ may answer your immediate questions.

If you have questions regarding this change, contact Carol Connolly, Director, Knowledge Resource Service (KRS) at carol.a.connolly@ahs.ca.

If you need assistance with using DynaMed Plus and its mobile apps, email KRS@ahs.ca or visit the KRS website to chat directly with library staff.
